

Applicability

The following tariff provisions shall be applicable to a Host Customer, as defined herein, that requests Net Metering services from the Distribution Company, with the exception of a Host Customer that is an electric company, generation company, aggregator, supplier, energy marketer, or energy broker, as those terms are used in M.G.L. c. 164, §§ 1 and 1F- and 220 C.M.R. 11.00. Service under this rate to any Host Customer is subject to the Distribution Company's printed requirements and the Distribution Company's Terms and Conditions – Distribution Service, each as in effect from time to time. The interconnection date of a facility shall have no bearing on a Host Customer's eligibility to request Net Metering services under the following tariff.

Section 1.01

Definitions

The terms set forth below shall be defined as follows, unless the context otherwise requires.

Agricultural Net Metering Facility ~~shall mean~~ means a Renewable Energy generating facility that is operated as part of an agricultural business ~~that~~, generates electricity ~~that~~, does not have a generation capacity of more than two megawatts ~~and~~, is located on land owned or controlled by the agricultural business, and is used to provide energy to metered accounts of the business. "Agriculture" has the same meaning as provided in M.G.L. c. 128, § 1A; provided that, when necessary, the Commissioner of the Department of Agricultural Resources shall determine if a business is an agricultural business ~~and whether the facility is operated as part of that business.~~

Billing Period ~~shall mean~~ means the period of time set forth in the Distribution Company's terms and conditions for which ~~the~~ Distribution Company bills a Customer for its electricity consumed or estimated to have been consumed.

Class I Net Metering Facility ~~shall mean~~ means a plant or equipment that is used to produce, manufacture, or otherwise generate electricity and that is not a transmission facility and that has a design capacity of 60 kilowatts or less.

Class II Net Metering Facility ~~shall mean~~ means an Agricultural Net Metering Facility, Solar Net Metering Facility, or Wind Net Metering Facility with a generating capacity of more than 60 kilowatts but less than or equal to one megawatt; provided, however, that a Class II Net Metering Facility owned or operated by a Customer which is a municipality or other governmental entity may have a generating capacity of more than 60 kilowatts but less than or equal to one megawatt per unit.

Class III Net Metering Facility ~~shall mean~~ means an Agricultural Net Metering Facility, Solar Net Metering Facility, or Wind Net Metering Facility with a generating capacity of more than one megawatt but less than or equal to two megawatts; provided, however, that a Class III Net Metering Facility owned or operated by a Customer which is a municipality or other governmental entity may have a generating capacity of more than one megawatt but less than or equal to two megawatts per unit.

Company shall mean _____.

Customer shall mean means any person, partnership, corporation, or any other entity, whether public or private, who obtains distribution service at a customer delivery point and who is a customer of record of the Distribution Company ~~that purchases electricity~~ for its own electricity consumption.

Distribution Company means _____.

Host Customer shall mean:

(a) means a Customer with a Class I, II, or III Net Metering Facility or Neighborhood Net Metering Facility that generates electricity on the Customer's side of the meter; ~~or~~.

(b) ~~the Customer, person, group or other entity or organization that controls, owns, or operates a Neighborhood Net Metering Facility.~~

Interconnection Tariff shall mean means the Distribution Company's Standards for Interconnecting Distributed Generation, M.D.T.E. No _____.

ISO-NE shall mean means ISO New England Inc., the independent system operator for New England, or its successor, authorized by the Federal Energy Regulatory Commission to operate the New England bulk power system and administer New England's organized wholesale electricity market pursuant to the ISO-NE Tariff and operation agreements with transmission owners.

Neighborhood shall mean means a geographic area within a municipality, subject to the right of the Department to grant exceptions, pursuant to 220 CMR 18.09(6), that:

- (a) is recognized by the residents as including a unique community of interests;
- (b) falls within the service territory of the Distribution Company and within a single ISO-NE load zone; and
- (c) may encompass residential, commercial, and undeveloped properties.

Neighborhood Net Metering Facility shall mean means a Class I, II, or III Net Metering Facility that ~~is~~:

- (a) is owned by, or serves the energy needs of, a group of ten or more residential Customers that reside in a single Neighborhood and are served by a single Distribution Company; ~~and~~
- (b) may also be owned by, or serve the energy needs of, other Customers who reside in the same Neighborhood as are served by the same Distribution Company as the residential Customers that own or are served by the facility; and

(b)(c) is located within the same Neighborhood as the Customers that own or are served by the facility.

Net Metering ~~shall mean~~ means the process of measuring the difference between electricity delivered by a Distribution Company and electricity generated by a Class I, Class II, Class III or Neighborhood Net Metering Facility and fed back to the Distribution Company.

Net Metering Credit ~~shall mean~~ means the monetary value of the excess electricity generated by a Net Metering Facility, calculated pursuant to Section 1.0506, below.

Renewable Energy ~~shall mean~~ means energy generated from any source that qualifies as a Class I or Class II Renewable Energy generating source under M.G.L. c. 25A, § 11F; provided, however, that after conducting administrative proceedings, the Department of Energy Resources, in consultation with the Department of Agricultural Resources, may add technologies or technology categories.

Solar Net Metering Facility ~~shall mean~~ means a facility for the production of electrical energy that uses sunlight to generate electricity and is interconnected to the Distribution Company.

Wind Net Metering Facility ~~shall mean~~ means a facility for the production of electrical energy that uses wind to generate electricity and is interconnected to the Distribution Company.

Section 1.02 Interconnection

Interconnection of Net Metering Facilities ~~shall be~~ is governed by the terms of the Distribution Company's Interconnection Tariff, which sets forth the following information for net-metering services:

- (a) Application procedures;
- (b) Information necessary for requests;
- (c) Metering and technical requirements; and
- (d) Termination and suspension provisions.

The Customer shall indicate its request for net metering on its application pursuant to the Interconnection Tariff.

Section 1.03 Metering and Reporting of Generation

1. Host Customers with a Class II or III Net Metering Facility shall install at the Host Customer's expense revenue-grade meters to measure the generator's kilowatt-hour ("kWh") output. The Host Customer will provide the actual metered output for each calendar year to the Company by January 31 of the following year.

entity, the Distribution Company shall calculate for each Billing Period a Net Metering Credit equal to the product of the:

- (a) excess kilowatt-hours, by time-of-use if applicable; and
- (b) sum of the following Distribution Company charges applicable to the rate class under which the Host Customer takes service:
 - (i) the default service kilowatt-hour charge (in the ISO-NE load zone where the Host Customer is located);
 - (ii) the distribution kilowatt-hour charge;
 - (iii) the transmission kilowatt-hour charge; and
 - (iv) the transition kilowatt-hour charge.

2. For a Class I Net Metering Facility other than a Class I Wind Net Metering Facility, Class I Agricultural Net Metering Facility, or a Class I Solar Net Metering Facility, the Distribution Company shall calculate a Net Metering Credit for each Billing Period as the product of the:

- (a) excess kilowatt-hours, by time-of-use if applicable; and
- (b) average monthly clearing price at the ISO-NE.

3. ~~For~~ For a Neighborhood Net Metering Facility or a Class III Net Metering Facility where the Host Customer is not a municipality or governmental entity, the Distribution Company shall calculate a Net Metering Credit for each Billing Period as the product of the:

- (a) excess kilowatt-hours, by time-of-use if applicable; and
- (b) sum of the following Distribution Company charges applicable to the rate class under which the Host Customer takes service:
 - (i) the default service kilowatt-hour charge (in the ISO-NE load zone where the Host Customer is located);
 - (ii) the transmission kilowatt-hour charge; and
 - (iii) the transition kilowatt-hour charge.

- ~~4. For a Neighborhood Net Metering Facility, the Company shall calculate a Net Metering Credit for each Billing Period in the same manner as set forth in Section 1.05(3), above, by using the Distribution Company charges applicable to the residential rate designated by the Host Customer.~~

5.4. The calculation of Net Metering Credits under this section shall not include the demand side management and renewable energy kilowatt-hour charges set forth in M.G.L. c. 25, §§ 19-20.

6.5. For any Billing Period for which the Distribution Company calculates a Net Metering Credit for a Host Customer, the Distribution Company shall apply the Net Metering Credit to the Host Customer's account, unless the Host Customer provides otherwise pursuant to Section 1.06-07. The Distribution Company shall carry forward, from Billing Period to Billing Period, any remaining Net Metering Credit balance.

Section 1.0607 Allocation of Net Metering Credits

1. For a Class I or II Wind Net Metering Facility, Solar Net Metering Facility, or Agricultural Net Metering Facility; Class III Net Metering Facility; or Neighborhood Net Metering Facility, the Distribution Company shall allocate Net Metering Credits, as designated in writing by the Host Customer, to other Customers who are in the Distribution Company's service territory and are located in the same ISO-NE load zone; ~~provided that:~~
 - ~~(a) Host Customers of Class I Net Metering Facilities shall designate no less than 20 % of such Credits to each recipient (i.e., no more than five designees).~~
 - ~~(b) Host Customers of Class II Net Metering Facilities shall designate no less than 10 % of such Net Metering Credits to each recipient (i.e., no more than 10 designees).~~
 - ~~(c) Host Customers of Class III Net Metering Facilities shall designate no less than two % of such Credits to each recipient (i.e., no more than 50 designees).~~
 - ~~(d) Host Customers of Neighborhood Net Metering Facilities shall not be limited in the number of recipients that can be designated to receive Net Metering Credits.~~
2. For a Neighborhood Net Metering Facility, the Distribution Company may only allocate Net Metering Credits ~~only~~ to residential or other Customers who reside in the same Neighborhood in which the Neighborhood Net Metering Facility is located and have an ownership interest in, or are served by, the Neighborhood Net Metering Facility.
3. For any Billing Period for which the Distribution Company allocates a Net Metering Credit to a Customer, the Distribution Company shall apply the allocated Net Metering Credit to the ~~Customer's~~Customer's account. The Distribution Company shall carry forward, from Billing Period to Billing Period, any remaining Net Metering Credit balance.
4. For a Class III Net Metering Facility, the Distribution Company may elect to pay to the Host Customer Net Metering Credits, rather than allocating such Credits. The Distribution Company must provide written notice to the Host Customer of its election to either purchase or allocate Net Metering Credits within 30 days of the Host Customer's request for Net Metering Services. If the Distribution Company elects to pay to the Host

Customer Net Metering Credits rather than allocating such Credits, the Distribution Company shall continue to pay such credits to the Host Customer so long as the Host Customer takes service under this tariff or as mutually agreed by the Distribution Company and the Host Customer.

5. The Distribution Company is responsible for accurately allocating Net Metering Credits consistent with a Host Customer's written designation in Schedule Z to the Distribution Company's Interconnection Tariff.

Section 1.0708 Net Metering Recovery Surcharge

The charges listed below are non-bypassable and shall be applied to all kWhs delivered by the Distribution Company to a Customer. The operation of the Net Metering Recovery Surcharge ("NMRS") is subject to all powers of suspension and investigation vested in the Department.

1) Rates

The purpose of the ~~Net Metering Recovery Surcharge ("NMRS")~~ is to recover the ~~non-reconciling distribution portion of~~ Net Metering Credits applied to customers and the non-reconciling distribution portion of revenue displaced by customers who have installed on-site generation facilities in accordance with G.L. c. 164, §§ 138 and 139. This surcharge provides the Distribution Company with a mechanism to recover such Credits and displaced revenue, and to reconcile actual NMRS revenue amounts recovered from customers with actual recoverable amounts.

2) Applicability of NMRS

The NMRS shall be applicable to all firm distribution of electricity, as measured in kWhs, delivered by the Distribution Company ~~unless otherwise designated.~~ Although the NMRS is a separate surcharge, it may be included in the Distribution Company's Distribution Charge for billing purposes.

3) Effective Date of Annual Surcharge

The date on which the annual NMRS becomes effective shall be the first day of each calendar year, unless otherwise ordered by the Department. The Distribution Company shall submit NMRS filings as outlined in Section 1.0708(6) of this tariff at least 30 days before the NMRS is proposed to take effect.

4) NMRS Formula

$$\text{NMRS}_x = (\cancel{\text{DNMC}_x} \text{NM}_{x-1} + \text{DDR}_{x-1} + \text{PPRA}_{x-12}) / \text{FkWh}_x,$$

where

x = The year over which the surcharge applies;

$NMRS_x$ = The Net Metering Recovery Surcharge for year x ~~adjusted annually~~;

~~$DNMC_x$~~ NMC_{x-1} = The ~~non-reconciling distribution portion of~~ Net Metering Credits ~~applied as forecasted~~ for year $x-1$, based on actual data where available and estimated for the period where actual data is unavailable;

DDR_{x-1} = The non-reconciling distribution portion of revenue displaced, as defined in Section 1.07(5), by net metering facilities ~~as forecasted for year x for year $x-1$~~ , based on actual data where available and estimated for the period where actual data is unavailable;

$PPRA_{x-2}$ = The Past Period Reconciliation Amount defined as the ending balance including interest, calculated on the average monthly reconciling balance using the customer deposit rate as outlined in 220 C.M.R. 26.09, of the difference between (a) the sum of the ~~$DNMC$~~ NMC and ~~DDR~~ ~~portion of the Net Metering Credits actually applied to customers~~ based on actual data for year $x-2$ and (b) the revenues actually collected through the NMRS as approved by the Department for year $x-1$;

$FkWh_x$ = The Forecasted kWh for year x , defined as the forecasted amount of electricity to be distributed to the Distribution Company's distribution customers.

5) Determination of Revenue Displaced by Net ~~metering~~ Metering Facilities

- a) The revenue displaced by net metering facilities is the non-reconciling distribution revenue associated with the displaced kWhs. The quantity of displaced kWhs is equal to the kWhs generated by the net metering facility minus the excess kWhs, if any, delivered to the Distribution Company's distribution system. The kWhs generated by the net metering facility shall be determined by:
 - i) actual metering of the kWh output of the generating facility; or
 - ii) estimating the kWh output of a generating facility when actual metering is not feasible.
- b) For those Host Customers with GIS accounts at the ISO-NE for renewable energy certificate ("REC") reporting, the actual metered data will be used in this determination. The Host Customer must provide this annual generation

information to the Distribution Company by January 31 of each year for the prior year's generation.

- c) For those Host Customers with a Class II or ~~Class-III~~ Net Metering Facility without a GIS account at the ISO-NE, the Distribution Company will install at the customer's expense revenue class meters to determine the generator kWh output. In addition, the Host Customer will provide the capabilities and access needed to read the meter.
- d) For those Host Customers with a Class I Net Metering Facility without a GIS account at the ISO-NE, the Distribution Company will estimate the generator kWh output. In those instances where estimates are required, estimates will be based upon available monthly capacity factor information associated with the size and type of net metering facility installed, or as otherwise specified below. Such information shall be obtained from publicly available sources such as ISO New England, the MTC Massachusetts Renewable Energy Trust and weather data outlets as determined by the Distribution Company and subject to Department review and approval.
- i) For Class I Solar Net Metering Facilities without a GIS account at the ISO-NE, the estimate shall come directly from the generation information of the Solar Net Metering Facility's inverter if available. The Host Customer must provide the inverter's annual generation information to the Distribution Company by January 31 of each year for the prior year's generation. If no data is available to the Distribution Company, the estimate shall be calculated on a case-by-case basis with the best available data.
- ii) ~~For Class I Wind Net Metering Facilities without a GIS account at the ISO-NE, the estimate shall be calculated as:~~
- (1) the estimate shall come directly from the generation information of the Wind Net Metering Facility's meter, inverter, or other generator system if available. The Host Customer must provide the inverter's annual generation information to the Distribution Company by January 31 of each year for the prior year's generation; or
 - (2) if no generation information is available for the Wind Net Metering Facility, the Host Customer shall provide to the Distribution Company the average wind speed at the nacelle of the Wind Net Metering Facility over the course of a year, times(if available), the Wind Net Metering Facility's production capacity at the wind power curve (or equivalent). The Distribution Company will use the average wind speed, times 8760 at the nacelle and the wind power curve in order to estimate the production of the Wind Net Metering Facility; or

ii)(3) if neither generation information nor wind and power curve information is available, or no data is provided, the estimate shall be calculated on a case-by-case basis with the best available data.

iii) For all non-wind and non-solar Class I Net Metering Facilities, the estimate shall be calculated on a case-by-case basis with the best available data.

6) Information Required to be Filed with the Department

Information pertaining to the annual NMRS shall be filed with the Department at least thirty (30) days before the date on which a new NMRS is requested to be effective. Such filing shall include preliminary reconciliation data for the year in which the filing is made, with final reconciliation amounts to be submitted the subsequent year. The reconciliation data will reflect detailed accounting of distribution Net Metering Credits paid to customers and displaced distribution revenue resulting from Net Metering facilities. This information will be submitted with each annual NMRS filing, along with complete documentation of the reconciliation-adjustment calculations.

7) Customer Notification

The Distribution Company will notify customers in simple terms of changes to the NMRS, including the nature of the change and the manner in which the NMRS is applied to the bill. In the absence of a standard format, the Distribution Company will submit this notice for approval at the time of each NMRS filing. Upon approval by the Department, the Distribution Company must immediately distribute these notices to all of its distribution customers either through direct mail or with its bills.

~~8) Recovery of Other Revenue Components~~

~~The Company will recover the default service, transmission and transition revenue and reconcilable distribution revenue portions of the Net Metering Credits paid to customers through the usual annual reconciliation processes in place for such charges.~~

9)8) Commodity Reconciliation

The Distribution Company will ~~reconcile default service commodity credits allocated within~~include the Net Metering Credits given to energy market payments received from ISO-NE for the electricity generated by Class II and III Net Metering ~~customers through~~Facilities in the Distribution Company's ~~current~~ annual ~~default service commodity reconciliation proceeding.~~ Class II and III Net Metering of default service costs. Host Customers with a Class II or III Net Metering Facility shall provide all necessary information to, and cooperate with, the Distribution Company to enable the Distribution Company to obtain the

appropriate asset identification for reporting generation to ISO-NE. The Distribution Company will report all exported power to the ISO-NE as a settlement only generator and net this reported usage and credits earned against the amount of default service commodity earned as a portion of the Net Metering Credits. The resulting amount will then be filed within the Distribution Company's annual default service commodity reconciliation proceeding.

Section 1.0809 Closure of Tariff to New Customers

Service under this tariff is closed to new applicants upon determination by the Distribution Company that the aggregate capacity of all Class I, II, III, and Neighborhood Net Metering Facilities, ~~which~~ whose Host Customers are receiving Net Metering services under this Net Metering tariff, has reached one percent of the Distribution Company's ~~actual, historic~~ highest historical peak load. Immediately following approval of this tariff by the Department, the Distribution Company will post, to the Distribution Company's website, the Distribution Company's highest historical peak load. Each year by February 1 the Distribution Company will update the Distribution Company's highest historical peak load on the Distribution Company's website and with an informational filing to the Department. Additional applications may be accepted, for incremental aggregated capacity associated with one percent of prospective increases in the Distribution Company's peak load. The calculation of aggregated capacity shall be in accordance with 220 C.M.R. 18.07.

Section 1.0910 Renewable Energy and Environmental Attributes

The provision of Net Metering services does not entitle Distribution Companies to ownership of, or title to, the renewable energy or environmental attributes, including renewable energy certificates, associated with any electricity produced by a Net Metering facility.

Section 1.4011 Dispute Resolution

The Dispute Resolution provisions included in the Distribution Company's Interconnection Tariff in Section 9.0 shall be available ~~to for the Company or a Host Customer to resolve issues relating~~ purpose of resolving disputes related to the operation of this tariff: between (1) the Distribution Company and Host Customers and (2) the Distribution Company and Customers to whom Net Metering Credits are allocated.
